

This is not a template. This is **Journalism**.

"Chronicle" is not just "sans-serif." It is **The Modernist Grid**. It must embody the speed, precision, and objectivity of mid-century Swiss graphic design (think *Neue Grafik* or the *Vignelli* systems).

To elevate "Chronicle" to God-Tier for print, we strip away the "default" look of DejaVu Sans and replace it with a **Swiss International Style** system.

Here is the **Chronicle Editorial System 2.0**.

1. The Design Philosophy: "Objectivity & Density"

Current "sans-serif" templates look like tech documentation.

The New Chronicle Principle:

- **The Grid is God:** We use a strict, visible structure. Thick black rules (lines) separate hierarchy levels.
- **The "Lede" (Lead-in):** The first paragraph of every chapter is not just text; it is an **Entry Point**. It must be larger, bolder, or use a "Deck" style to hook the reader.
- **Ragged Right, but Tight:** We disable justification to create a "breathable" right edge, but we use strict hyphenation to prevent "sharks' teeth" (ugly jagged patterns).

2. The Typographic Stack (The "Swiss" Choice)

DejaVu Sans is functional but lacks authority. We upgrade to the "Helvetica" lineage.

- **Body Type: TeX Gyre Heros** (Helvetica clone) or **Inter**.
 - *Why:* It is neutral, dense, and authoritative. It says "This is fact."
 - *Settings:* Scale=0.92 (Helvetica is wide; scaling it down increases density).
- **Headings: Oswald** or **TeX Gyre Heros Condensed**.
 - *Why:* Condensed fonts allow for massive headlines that don't break onto two lines. They shout.
- **Data/Captions: Fira Mono** or **JetBrains Mono**.
 - *Why:* For tables, code, or side-notes, monospaced fonts provide the "teletype" aesthetic of a news wire.

3. The Layout System: "The Editorial Column"

We abandon the standard "book block" for a **Magazine/Journal Layout**.

Zone	Function
------	----------

Top Rail	A distinct header area separated by a heavy rule (2pt). Contains Running Head + Page Number.
The "Lede" Block	The first paragraph spans the full width, bold weight, slightly larger size.
The Body	Standard text. No indentation. Parskip (vertical space) separates thoughts.
Pull Quotes	Massive, bold, left-aligned quotes sandwiched between thick black lines.

4. Implementation Command (The Code)

Give this prompt to Claude to generate the **Chronicle 2.0** engine.

ROLE: SWISS GRAPHIC DESIGNER / XeLaTeX ENGINEER

PROJECT: CHRONICLE EDITORIAL TEMPLATE (PRINT PREPRESS)

OBJECTIVE:

Create the .latex template for "**Chronicle.**" This is a high-density, Modernist template for non-fiction, journalism, and technical manuals.

1. THE GEOMETRY (geometry package)

- **Margins:** Tight and asymmetrical.
 - Inner: 0.75in
 - Outer: 0.5in (Pushing content to the edge)
 - Top: 0.75in
 - Bottom: 0.75in
- **Grid:** Enable parskip (0.15in). **Disable indentation.**

2. THE TYPOGRAPHY (fontspec)

- **Main Font:** TeX Gyre Heros (Helvetica).
 - *Options:* Scale=0.92, Ligatures=TeX.
- **Mono Font:** Fira Mono (Scale=MatchLowercase).
- **Alignment:** \RaggedRight (requires ragged2e package) for consistent spacing without river-gaps.

3. THE "NEWSROOM" COMPONENTS (titlesec & fancyhdr)

- **Chapter Headings (\chapter):**
 - **Top Rule:** A heavy 4pt black line spanning the page width.
 - **The Number:** Huge (60pt), Grey (#A9A9A9), Right-Aligned.

- **The Title:** Flush Left, Black, `\bfseries`, `\sffamily`, `\huge`, Condensed.
- **Bottom Rule:** A 1pt black line below the title.
- **The "Lede" (First Paragraph):**
 - Use `\lettrine` logic OR a custom environment to make the first paragraph of a chapter `\large` and `\bfseries`.
- **Section Headers (`\section`):**
 - Uppercase, spaced out (`\addfontfeature{LetterSpace=10}`), preceded by a `\hrule`.

4. THE MICRO-TYPOGRAPHY

- **Lists:** Use `enumitem` to reduce list spacing to `nosep`. Lists should look like data streams, not outlines.
- **Pull Quotes:** Define a `blockquote` environment with a thick left border (`\vrule`) width 3pt, padding 1em.

Generate the full `chronicle.latex` file compatible with Pandoc.

Why this is "God-Tier" for Chronicle

1. **The "Lede" Treatment:** By forcing the first paragraph to be bold/large, you mimic the experience of reading a *New York Times* article, instantly distinguishing it from a novel.
2. **The Heavy Rules:** The 4pt top border acts as a visual "anchor," giving the page an architectural feel that DejaVu Sans on its own can never achieve.
3. **Ragged Right:** It reduces eye fatigue for dense information (technical/non-fiction) and eliminates the "gappy" look of justified sans-serif type.
