

This is not a template. This is an **Annual Report**.
"Matrix" is the language of high-finance, strategy consulting (McKinsey/BCG), and Fortune 500 governance. It relies on the **"Swiss Corporate"** Philosophy: Design is a neutral vessel for data. Trust is established through precision, grid alignment, and tabular perfection.
To elevate "Matrix" to God-Tier for print, we must abandon the "generic business doc" look and implement a **Modular Grid System** capable of handling complex financial data and executive summaries. Here is the **Matrix Corporate System 2.0**.

1. The Design Philosophy: "Radical Clarity"

Current business templates are often text-heavy and gray.

The New Matrix Principle:

- **Information is Capital:** We use a strict **6-Column Grid**. Text spans 4 columns; the remaining 2 are for "Key Takeaways" (Executive Summaries) in the margin.
- **Tabular Perfection:** Business is numbers. We enforce **Tabular Lining Figures** (monospaced numbers that line up vertically) everywhere. No "old style" numbers here.
- **Hierarchy is Weight:** We do not use decorative sizes. We use extreme weight contrast (Black vs. Regular) to signal importance without clutter.

2. The Typographic Stack (The "Fintech" Choice)

Inter is excellent, but we must unlock its "Pro" features for print.

- **Body Type: Inter** (Static).
 - *Settings:* Numbers=Tabular (Crucial). ContextualAlternates=True.
 - *Why:* It is the new standard for digital-native business. It reads like a screen but prints like a laser jet.
- **Headings: Inter** (Display/Black Weight).
 - *Settings:* Tracking=-0.03em.
 - *Why:* Tight, heavy headings feel confident and "locked in."
- **Data/Tables: JetBrains Mono or Roboto Mono**.
 - *Why:* For financial tables, code snippets, or raw data, a distinct monospace font prevents ambiguity.

3. The Layout System: "The Executive Summary Grid"

We use an asymmetric grid designed for skimming.

Zone	Function
------	----------

The "Key Data" Margin	The left 1/3 of the page. Reserved for callouts, "TL;DR" summaries, and definitions. Executives read this first.
The Narrative Column	The right 2/3 of the page. The deep dive content.
The "Boardroom" Header	A structured header containing: <i>Document Classification</i> (e.g., CONFIDENTIAL), <i>Date</i> , and <i>Section</i> .

4. Implementation Command (The Code)

Give this prompt to Claude to generate the **Matrix 2.0** engine.

ROLE: CORPORATE IDENTITY DESIGNER / XeLaTeX ENGINEER

PROJECT: MATRIX BUSINESS TEMPLATE (PRINT PREPRESS)

OBJECTIVE:

Create the .latex template for "**Matrix.**" This is a structured, data-heavy template for annual reports, white papers, and consulting decks.

1. THE GEOMETRY (geometry package)

- **Grid:** Asymmetric 1/3 + 2/3 layout.
 - Inner: 0.75in
 - Outer: 0.75in
 - Top: 1.0in
 - Bottom: 1.0in
 - **Marginpar Width:** 1.75in (The "Executive Sidebar").
 - **Marginparsep:** 0.25in.

2. THE TYPOGRAPHY (fontspec)

- **Main Font:** Inter (Upright, Bold, Italic).
 - *Features:* Numbers={Lining, Tabular}, Kerning=On.
- **Mono Font:** JetBrains Mono (Scale=0.85).
- **Hierarchy:**
 - **H1:** Inter Black, 24pt, Tracking -20.
 - **H2:** Inter Bold, 14pt, Uppercase, Tracking 50, Color=MidnightBlue (#191970).
 - **Body:** 10pt/14pt (Dense but legible).

3. THE "BOARDROOM" COMPONENTS (tcolorbox & fancyhdr)

- **Executive Summary Box (\begin{execsummary}):**
 - A shaded gray box (black!5) with a thick left blue border

- (blue!40!black, 4pt).
 - Placed at the start of major sections.
- **The "Key Data" Sidebar (\marginpar):**
 - Redefine margin notes to be **Bold**, \footnotesize, and \RaggedRight.
 - Use this for defining terms or pulling out ROI stats.
- **Headers:**
 - **Top Left:** Project Name (Gray).
 - **Top Right:** "CONFIDENTIAL" (Red, Small Caps, Letterspaced).
 - **Bottom Line:** A 0.5pt gray rule separating header from content.
- **Tables (booktabs):**
 - No vertical lines.
 - Heavy top/bottom rules.
 - **Zebra Striping:** Alternating light blue rows (blue!5) for readability.

Generate the full matrix.latex file compatible with Pandoc.

Why this is "God-Tier" for Matrix

1. **Tabular Figures:** Using Numbers={Lining, Tabular} ensures that in a table of financial results, the decimal points line up perfectly. Standard fonts use "proportional" numbers where a "1" is thinner than a "0", ruining vertical alignment.
2. **The "Confidential" Header:** Adding a dedicated slot for document classification (Internal/Confidential) makes the template feel like a real business tool used by Goldman Sachs or McKinsey.
3. **The Sidebar:** Executives often don't read the whole page. By forcing a layout with a "Key Data" margin, you encourage authors to pull out the most important stats (ROI, CAGR, Net Income), fitting the "skimming" behavior of the target audience.
